THE UNITED STATES PATENT AND TRADEMARK OFFICE

Applicant: James John Wilson et al.)
For: REDUCED NOISE MULTI- 0
RIBBED TRANSMISSION BELT)
Serial No. 09/893,156)
Filed: June 27, 2001)

Assistant Commissioner of Patents
Washington, D.C. 20231

Confirmation No. 3836
Docket No. DN2001117
Art Unit: 3682

Examiner: Justin Stefanon

I hereby certify that this correspondence is being
deposited with the United States Postal Service as
first class mail in an envelope addressed to:

Assistant Commissioner of Patents, Washington,
DC 20231, on DEC 13, 2002

(Date of Deposit)

AMENDMENT UNDER 37 C.F.R. § 1.111

Dear Sir:

In response to the Office Action mailed on October 2, 2002, please amend the
above identified patent application without prejudice as follows:

IN THE SPECIFICATION

On page 1, please replace the [0005] full paragraph, with the following paragraph
[0005]:

a1 [0005] The second is to vary the pitch of the cogs with a repeating pitch pattern, as
disclosed by US Patents 4,264,314 and 4,832,670. US Patent 4,264,314 discloses a cog
belt with reduced noise. The transverse groove depths, the groove angles, and the distance
between the grooves are varied. Similar to US Patent 4,264,314, US Patent 4,832,670
also discloses multiple elements of the belt construction are varied simultaneously to
produce a reduced noise belt. The belt is defined by a repeating sequence pattern along the
length of the belt. For both belts, because of the number of variables that must be altered,
construction of the belt may be more complex and costly. Also, the disclosed methods are
less effective in reducing overall noise levels than inclining the transverse grooves and do
not always eliminate the harmonic noise spikes.
